

Product Description and Production

- Coastal Color Blend is Humic Compost blended with fertilizers and amendments to correct common regional soil deficiencies and optimize bloom performance.
 - Contains beneficial microorganisms to help reduce the incidence of damping-off pathogens and other common diseases.
 - Moisture content at the time of marketing is approximately 25%.
 - One cubic yard of Coastal Color Blend weighs approximately 1000 to 1200 pounds.
- Coastal Color Blend provides:
 - Slow-release nutrients for long- lasting color
 - Fast-release nutrients for quick plant establishment
 - Gypsum additive builds stronger root systems
 - Establishes a healthy population of beneficial micro-organisms
 - Organics to retain moisture and to improve soil

Benefits

- Coastal Color Blend provides nutrients and organic matter to optimize the performance of blooming plants.
- Coastal Color Blend helps promote larger and more prolific blooms.
- Color beds can last up to 6 to 8 weeks longer than untreated areas.
- Increases nutrient and water holding capacity, encourages disease suppression, reduces fertilizer leaching, improves soil structure and provides food for beneficial micro-organisms.

Application

- Apply at the rate of one cubic yard per 1000 square feet.
- Work or roto-till into top several inches at the time of planting.
