

Product Description and Production

- Garden Blend Mulch is a composted, dark brown mulch with a loose texture.
- Garden Blend Mulch is a 50-50 blend of Trail Mulch and Perennial Mulch.
- Composted material is processed for a minimum period of one month. Temperatures are maintained between 132° to 155° F throughout the thermophilic stage to kill pathogens and weed seeds. This process meets California Title 14 regulations, *Process to Further Reduce Pathogens*.
- Moisture content at the time of marketing is approximately 25%.
- Material is ground to produce a typical particle size of less than one inch in diameter and two inches in length. 90% of the product, by volume, conforms to this particle size range.
- One cubic yard of Garden Blend Mulch weighs approximately 575 to 625 pounds.

Benefits

- Garden Blend Mulch is specifically designed for use in garden beds of annuals or perennials.
- Garden Blend Mulch enhances the aesthetics and functionality of perennial or annual beds while providing long term improvement of soil tilth.
- Improves water filtration, increases the soil's water holding capacity and creates a nutrient reservoir.
- Decreases weeding, improves plant health and disease resistance.
- Enhances microbial activity by providing an established population of beneficial microbes. This activity is essential for mineralization and plant nutrient uptake, as well as disease suppression.
- Holds on slopes for erosion control.
- Garden Blend Mulch is designed to last longer than our Perennial Mulch.

Application

- Apply over soil after planting or on existing plantings.
- An application rate of six to nine cubic yards per 1000 square feet is recommended for a two to three inch thick mulch layer.
- Avoid direct contact with plant stems by pulling mulch several inches back from the plant crown or stems.
