

Product Description and Production

- Non-amended Topsoil has a friable sandy loam character that is free of roots, clods and stones larger than 5/16 inch, pockets of coarse sand, sticks and other litter.
- No warranty is made regarding weeds seeds or pests.
- The soil has not been used for farm purposes within the last year, which makes nematodes and undesirable insects unlikely.
- Moisture content at the time of marketing is approximately 10%.

Non-amended Topsoil has the following parameters:

Sand	50% to 80%
Clay	20% maximum
Silt	30% maximum
pH, units	6.0 to 8.0
ECe, dS/m	Less than 3.0
SAR	Less than 12.0

- Permeability rate and agricultural suitability test results are available on request.
- One cubic yard of Top Soil weighs approximately 2700 pounds.

Benefits

- Non-amended Topsoil provides a good sandy loam textured soil for landscape augmentation.
- Non-amended Topsoil can be used to:
 - Raise the grade level
 - Fill planter beds
 - Replace poor quality native soil

Application

- Mix into the existing soil to prevent layering.
- Three cubic yards will cover 1,000 square feet with a one inch deep layer.
